

JAY PATEL

Thane, Maharashtra | [+91 98920 07108](tel:+919892007108) | gjaypatel15@gmail.com | [GitHub](#) | [LinkedIn](#)

Data Analyst · Python · SQL · Power BI · Tableau

Technical Skills

Languages	Python (advanced), SQL (MySQL), Java (basic)
Data & Analysis	Pandas, NumPy, Data Cleaning, EDA, Statistical Validation, Regex
BI & Viz	Power BI, Tableau, Excel (pivot tables, advanced charts)
ML Libraries	Scikit-learn (classification, feature engineering)
Databases	MySQL, MongoDB
Dev Tools	Git, Jupyter Notebook, VS Code

Experience

Data Validation Analyst (QA Intern Role)

Schbang

Jan 2026 – Ongoing

- Designed and executed **data validation workflows** for “Second Brain” AI product, ensuring accuracy and consistency of structured and unstructured datasets across chat, knowledge-base, and document pipelines.
- Wrote **20+ Python scripts** using Pandas, Selenium, and Playwright to automate data quality checks, reducing manual validation effort by **40%**.
- Identified **50+ data defects** including schema mismatches, null propagation, and incorrect AI retrieval outputs; produced data-backed defect reports shared with product and ML stakeholders.
- Increased data test coverage by **30%** through parameterised test design covering boundary values, negative inputs, and edge cases for AI model data flows.
- Queried MySQL and MongoDB databases to cross-validate application outputs against source data, identifying discrepancies at the record level.
- Tracked quality trends across releases, providing analytical summaries to guide prioritisation of fixes before each deployment.

Projects

Predictive Maintenance Using ML

Python · EDA · Scikit-learn · Visualisation

- Conducted full EDA on sensor dataset — correlation analysis, distribution plots, and outlier detection — to identify key failure predictors before model training.
- Trained classification model achieving **92% accuracy**; validated output predictions and visualised feature importance to communicate findings to non-technical stakeholders.
- Reducing simulated equipment downtime by **30%** through predictive insights.

Farm Expert App

Python · Data Analysis · ML · Visualisation

- Analysed agricultural dataset (soil composition, rainfall, temperature) to surface actionable crop-selection insights; visualised findings using Matplotlib.
- Delivered crop prediction system serving **200+ users** at **85% accuracy**; data preparation and feature selection were key contributors to model performance.

Education

B.E. in Artificial Intelligence & Data Science

CGPI: 7.0

New Horizon Institute of Technology and Management, Thane

Jun 2025

Diploma in Computer Engineering

82%

Pravin Patil Polytechnic, Bhayandar

Jul 2022

Certifications

- Python Programming for Absolute Beginners – SQL in Python (Udemy)
- Cybersecurity Fundamentals (IBM)
- Accenture North America – Data Analytics and Visualization Job Simulation
